ARXIS - Traceability does not grant approval

Private portfolio design study. Not a client deployment.

Problem and decision user

A changed requirement can leave inconsistent decisions, versions and deliverables in circulation. The proposed user is design lead, documentation coordinator and project reviewer.

Operating and economic approach

An operating model for traceable design documentation and controlled project change. The package joins the business question, product scope, operating handoffs, technology/data assumptions and financial consequences. Existing tools and simpler alternatives remain part of the decision.

Checked result

Seven tests check every decision-to-artifact obligation, duplicates, unknown references and version/actor controls. A matching version permits human review, not automatic engineering approval.

Capabilities illustrated

Requirements; document governance; change control; cross-functional coordination. These are demonstrated documentary/model mechanisms, not a certification of personal independent mastery.

Limits and next use

Traceability completeness does not prove correctness of engineering design or compliance with building law. Use the detailed specification and validation memo to scope a real mandate, identify missing data and define the smallest decisive test. Publication and deployment require separate review.
